Chapter 1

Namespace Index

1.1 Package List

Here are the packages with brief descriptions (if available):

recommendation_system	9
recommendation_system.edu.duke	9
recommendation_system.filters	10
recommendation_system.movierunner	10
recommendation_system.movies	10
recommendation_system.raters	10
recommendation_system.ratings	10
recommendation_system.recommenders	10

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Comparable	
recommendation_system.ratings.Rating	91
recommendation_system.edu.duke.DirectoryResource	15
recommendation_system.edu.duke.FileResource	20
recommendation_system.filters.Filter	25
recommendation_system.filters.AllFilters	11
recommendation_system.filters.DirectorsFilter	13
recommendation_system.filters.GenreFilter	35
recommendation_system.filters.MinutesFilter	42
recommendation_system.filters.TrueFilter	117
recommendation_system.filters.YearAfterFilter	121
recommendation_system.ratings.FirstRatings	27
recommendation_system.ratings.FourthRatingsOptimized	32
recommendation_system.edu.duke.ImageResource	37
recommendation_system.movies.Movie	44
recommendation_system.movies.MovieDatabase	48
recommendation_system.movierunner.MovieRunnerAverage	59
recommendation_system.movierunner.MovieRunnerSimilarRatingsOptimized	62
recommendation_system.movierunner.MovieRunnerWithFilters	64
recommendation_system.edu.duke.Pixel	71
recommendation_system.edu.duke.Point	79
recommendation_system.edu.duke.RangeResource	81
recommendation_system.raters.Rater	83
recommendation_system.raters.EfficientRater	16
recommendation_system.raters.PlainRater	75
recommendation_system.raters.RaterDatabase	86
recommendation_system.recommenders.Recommender	102
recommendation_system.recommenders.RecommendationRunner	94
RuntimeException	
recommendation_system.edu.duke.ResourceException	103
recommendation_system.ratings.SecondRatings	105
recommendation_system.edu.duke.Shape	109
recommendation_system.edu.duke.StorageResource	111
recommendation_system.ratings.ThirdRatings	112
recommendation_system.edu.duke.URLResource	119

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

recommendation_system.filters.AllFilters	11
recommendation_system.filters.DirectorsFilter	13
recommendation_system.edu.duke.DirectoryResource	15
recommendation_system.raters.EfficientRater	16
recommendation_system.edu.duke.FileResource	20
recommendation_system.filters.Filter	25
recommendation_system.ratings.FirstRatings	27
recommendation_system.ratings.FourthRatingsOptimized	32
recommendation_system.filters.GenreFilter	35
recommendation_system.edu.duke.ImageResource	37
recommendation_system.filters.MinutesFilter	42
recommendation_system.movies.Movie	44
recommendation_system.movies.MovieDatabase	48
recommendation_system.movierunner.MovieRunnerAverage	59
recommendation_system.movierunner.MovieRunnerSimilarRatingsOptimized	62
recommendation_system.movierunner.MovieRunnerWithFilters	64
recommendation_system.edu.duke.Pixel	71
recommendation_system.raters.PlainRater	75
recommendation_system.edu.duke.Point	79
recommendation_system.edu.duke.RangeResource	81
recommendation_system.raters.Rater	83
recommendation_system.raters.RaterDatabase	86
recommendation_system.ratings.Rating	91
recommendation_system.recommenders.RecommendationRunner	94
recommendation_system.recommenders.Recommender	102
recommendation_system.edu.duke.ResourceException	103
recommendation_system.ratings.SecondRatings	105
recommendation_system.edu.duke.Shape	109
recommendation_system.edu.duke.StorageResource	111
recommendation_system.ratings.ThirdRatings	112
recommendation_system.filters.TrueFilter	117
recommendation_system.edu.duke.URLResource	119
recommendation_system.filters.YearAfterFilter	121

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

src/main/java/recommendation_system/edu/duke/DirectoryResource.java	125
src/main/java/recommendation_system/edu/duke/FileResource.java	125
src/main/java/recommendation_system/edu/duke/FileSelector.java	125
src/main/java/recommendation_system/edu/duke/ImageFrame.java	126
src/main/java/recommendation_system/edu/duke/ImageResource.java	126
src/main/java/recommendation_system/edu/duke/Pixel.java	126
src/main/java/recommendation_system/edu/duke/Point.java	126
src/main/java/recommendation_system/edu/duke/RangeResource.java	127
src/main/java/recommendation_system/edu/duke/ResourceException.java	127
src/main/java/recommendation_system/edu/duke/Shape.java	127
src/main/java/recommendation_system/edu/duke/StorageResource.java	127

Class Documentation

6.1 recommendation_system.filters.AllFilters Class Reference

Inheritance diagram for recommendation_system.filters.AllFilters:

Collaboration diagram for recommendation_system.filters.AllFilters:

Public Member Functions

- `AllFilters` ()
- void `addFilter` (`Filter` f)
- boolean `satisfies` (String id)

6.1.1 Detailed Description

This class allows to combine all filters to pass them consecutively on an element that the user wants to filter.

The class contains the necessary methods for:

- Add different types of filters

Since

13/12/22

Version

1.0

6.1.2 Constructor & Destructor Documentation

6.1.2.1 AllFilters()

```
recommendation_system.filters.AllFilters.AllFilters ( )
```

Default builder

6.1.3 Member Function Documentation

6.1.3.1 addFilter()

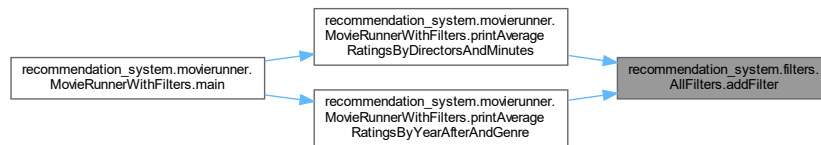

```
void recommendation_system.filters.AllFilters.addFilter (
    Filter f )
```

This method add a filter to our filter collection

Parameters

<i>f</i>	Filter to be added
----------	--------------------

Here is the caller graph for this function:

6.1.3.2 satisfies()

```
boolean recommendation_system.filters.AllFilters.satisfies (
    String id )
```

This method proves if the movie satisfies the criteria

Parameters

<i>id</i>	A string variable representing the ID of the movie
-----------	--

Returns

Boolean - True if the movie satisfies the criteria in the method - False otherwise

Implements [recommendation_system.filters.Filter](#).

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/filters/AllFilters.java`

6.2 recommendation_system.filters.DirectorsFilter Class Reference

Inheritance diagram for `recommendation_system.filters.DirectorsFilter`:

Collaboration diagram for `recommendation_system.filters.DirectorsFilter`:

Public Member Functions

- [DirectorsFilter](#) (String directors)
- boolean [satisfies](#) (String id)

6.2.1 Detailed Description

This class filters the movies directed by the specific directors that the user wants to watch. Note that each movie may have several directors.

The class contains the necessary methods for:

- Filtering movies based on the directors who directed them

Since

13/12/22

Version

1.0

6.2.2 Constructor & Destructor Documentation

6.2.2.1 DirectorsFilter()

```
recommendation_system.filters.DirectorsFilter.DirectorsFilter (
    String directors )
```

Builder overload

Parameters

<i>directors</i>	A string variable representing the directors of the movie
------------------	---

6.2.3 Member Function Documentation

6.2.3.1 satisfies()

```
boolean recommendation_system.filters.DirectorsFilter.satisfies (  
    String id )
```

This method proves if the movie has any of the directors that the user want

Parameters

<i>id</i>	A string variable representing the ID of the movie
-----------	--

Returns

Boolean - True if movie has one of the directors the user wants to filter - False otherwise

Implements [recommendation_system.filters.Filter](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/filters/DirectorsFilter.java`

6.3 recommendation_system.edu.duke.DirectoryResource Class Reference

Public Member Functions

- `Iterable< File > selectedFiles ()`

6.3.1 Member Function Documentation

6.3.1.1 selectedFiles()

```
Iterable< File > recommendation_system.edu.duke.DirectoryResource.selectedFiles ( )
```

The documentation for this class was generated from the following file:

- src/main/java/recommendation_system/edu/duke/[DirectoryResource.java](#)

6.4 recommendation_system.raters.EfficientRater Class Reference

Inheritance diagram for recommendation_system.raters.EfficientRater:

Collaboration diagram for recommendation_system.raters.EfficientRater:

Public Member Functions

- [EfficientRater](#) (String id)
- void [addRating](#) (String item, double rating)
- boolean [hasRating](#) (String item)
- String [getID](#) ()
- double [getRating](#) (String item)
- int [numRatings](#) ()
- ArrayList< String > [getItemsRated](#) ()

6.4.1 Detailed Description

This class uses a HashMap to store all the information about the ratings associated with a rater

The class contains the necessary methods for:

- Add ratings
- Get ID of the movies
- Get ratings of the movies
- Prove if the movie has a rating
- Get the number of the rated movies
- Get rated movies

Since

30/12/22

Version

1.0

6.4.2 Constructor & Destructor Documentation

6.4.2.1 EfficientRater()

```
recommendation_system.raters.EfficientRater.EfficientRater (
    String id )
```

Builder overload

Parameters

<i>id</i>	- A String variable representing the IMDB ID of the movie
-----------	---

6.4.3 Member Function Documentation

6.4.3.1 addRating()

```
void recommendation_system.raters.EfficientRater.addRating (
    String item,
    double rating )
```

This method adds ratings to the HashMap

Parameters

<i>item</i>	- A String variable representing IMDB ID of the movie
<i>rating</i>	- A variable representing the rating

Implements [recommendation_system.raters.Rater](#).

Here is the caller graph for this function:

6.4.3.2 getID()

```
String recommendation_system.raters.EfficientRater.getID ( )
```

This method gets the ID of the movie

Returns

Integer - ID of the movie

Implements [recommendation_system.raters.Rater](#).

6.4.3.3 getItemsRated()

```
ArrayList< String > recommendation_system.raters.EfficientRater.getItemsRated ( )
```

This method gets the list of the rated movies

Returns

Arraylist<String> of ratings

Implements [recommendation_system.raters.Rater](#).

6.4.3.4 getRating()

```
double recommendation_system.raters.EfficientRater.getRating (
    String item )
```

This method gets the rating of the movie

Parameters

<i>item</i>	- A String variable representing ID
-------------	-------------------------------------

Returns

Double - Rating of the movie

Implements [recommendation_system.raters.Rater](#).

6.4.3.5 hasRating()

```
boolean recommendation_system.raters.EfficientRater.hasRating (
    String item )
```

This method proves if the HashMap contains the ID of the movie

Parameters

<i>item</i>	- A String variable representing IMDB ID of the movie
-------------	---

Returns

Boolean - True if the list contains the ID of the movie - False otherwise

Implements [recommendation_system.raters.Rater](#).

6.4.3.6 numRatings()

```
int recommendation_system.raters.EfficientRater.numRatings ( )
```

This method gets the number of ratings on the HashMap

Returns

Integer - Number of ratings on the list

Implements [recommendation_system.raters.Rater](#).

The documentation for this class was generated from the following file:

- [src/main/java/recommendation_system/raters/EfficientRater.java](#)

6.5 recommendation_system.edu.duke.FileResource Class Reference

Public Member Functions

- [FileResource](#) ()
- [FileResource](#) (File file)
- [FileResource](#) (String filename)
- [FileResource](#) (boolean writable)
- [FileResource](#) (File file, boolean writable)
- [FileResource](#) (String filename, boolean writable)
- [Iterable](#)< String > [lines](#) ()
- [Iterable](#)< String > [words](#) ()
- [String](#) [asString](#) ()
- [CSVParser](#) [getCSVParser](#) ()
- [CSVParser](#) [getCSVParser](#) (boolean withHeader)
- [CSVParser](#) [getCSVParser](#) (boolean withHeader, String delimiter)
- [Iterable](#)< String > [getCSVHeaders](#) (CSVParser parser)
- void [write](#) (String s)
- void [write](#) ([StorageResource](#) list)
- void [write](#) (String[] list)
- void [write](#) (ArrayList< String > list)

6.5.1 Constructor & Destructor Documentation

6.5.1.1 FileResource() [1/6]

```
recommendation_system.edu.duke.FileResource.FileResource ( )
```

6.5.1.2 FileResource() [2/6]

```
recommendation_system.edu.duke.FileResource.FileResource (
    File file )
```

6.5.1.3 FileResource() [3/6]

```
recommendation_system.edu.duke.FileResource.FileResource (
    String filename )
```

6.5.1.4 FileResource() [4/6]

```
recommendation_system.edu.duke.FileResource.FileResource (
    boolean writable )
```

6.5.1.5 FileResource() [5/6]

```
recommendation_system.edu.duke.FileResource.FileResource (
    File file,
    boolean writable )
```

6.5.1.6 FileResource() [6/6]

```
recommendation_system.edu.duke.FileResource.FileResource (
    String filename,
    boolean writable )
```

6.5.2 Member Function Documentation

6.5.2.1 asString()

```
String recommendation_system.edu.duke.FileResource.asString ( )
```

6.5.2.2 getCSVHeaders()

```
Iterable< String > recommendation_system.edu.duke.FileResource.getCSVHeaders (
    CSVParser parser )
```

6.5.2.3 getCSVParser() [1/3]

```
CSVParser recommendation_system.edu.duke.FileResource.getCSVParser ( )
```

Here is the call graph for this function:

Here is the caller graph for this function:

6.5.2.4 getCSVParser() [2/3]

```
CSVParser recommendation_system.edu.duke.FileResource.getCSVParser (
    boolean withHeader )
```

Here is the call graph for this function:

6.5.2.5 `getCSVParser()` [3/3]

```
CSVParser recommendation_system.edu.duke.FileResource.getCSVParser (
    boolean withHeader,
    String delimiter )
```

6.5.2.6 `lines()`

```
Iterable< String > recommendation_system.edu.duke.FileResource.lines ( )
```

Here is the caller graph for this function:

6.5.2.7 `words()`

```
Iterable< String > recommendation_system.edu.duke.FileResource.words ( )
```

6.5.2.8 `write()` [1/4]

```
void recommendation_system.edu.duke.FileResource.write (
    ArrayList< String > list )
```

6.5.2.9 write() [2/4]

```
void recommendation_system.edu.duke.FileResource.write (  
    StorageResource list )
```

Here is the call graph for this function:

6.5.2.10 write() [3/4]

```
void recommendation_system.edu.duke.FileResource.write (  
    String s )
```

Here is the call graph for this function:

Here is the caller graph for this function:

6.5.2.11 write() [4/4]

```
void recommendation_system.edu.duke.FileResource.write (
    String[] list )
```

Here is the call graph for this function:

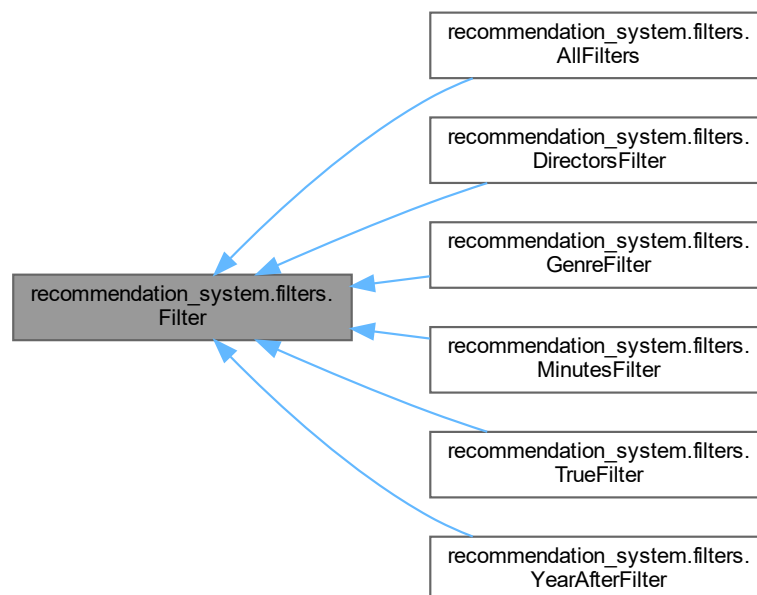

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/edu/duke/FileResource.java`

6.6 recommendation_system.filters.Filter Interface Reference

Inheritance diagram for `recommendation_system.filters.Filter`:

Public Member Functions

- boolean `satisfies` (String id)

6.6.1 Detailed Description

This interface has only one signature for the method `satisfies`. Any filters that implements this interface must also have this method.

The Interface contains:

- The method `satisfies` with one `String` parameter representing a movie ID

Since

13/12/22

Version

1.0

6.6.2 Member Function Documentation

6.6.2.1 `satisfies()`

```
boolean recommendation_system.filters.Filter.satisfies (  
    String id )
```

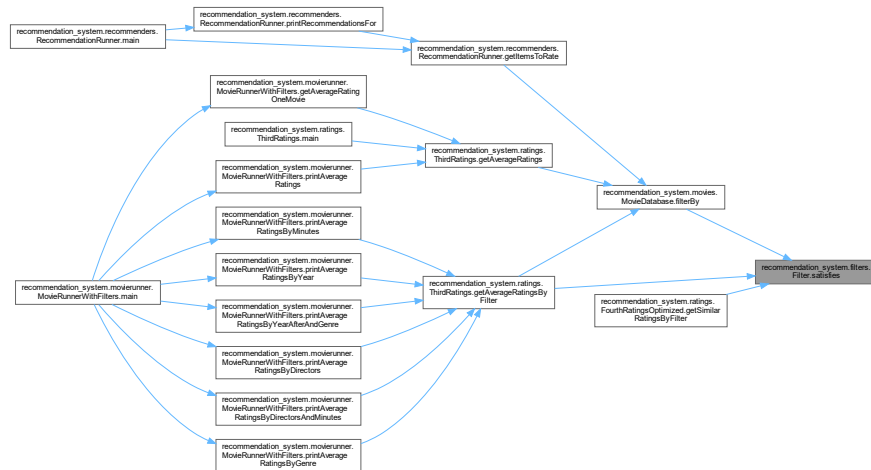

This method prove if the movie satisfies certain criteria

Parameters

<i>id</i>	A string variable representing the ID of the movie
-----------	--

Boolean - True if the movie satisfies the criteria in the method - False otherwise

Here is the caller graph for this function:

- `src/main/java/recommendation_system/filters/Filter.java`

Public Member Functions

- ArrayList< [Movie](#) > [loadMovies](#) (String fileName)
- void [testLoadMovies](#) ()
- ArrayList< [Rater](#) > [loadRaters](#) (String fileName)
- void [testLoadRaters](#) (String filename)

- static void **main** (String[] args)

6.7.1 Detailed Description

Class to answer simple questions about movies and ratings. - Phase 1

The class contains the necessary methods for:

- Process every record from the CSV file and return an ArrayList of type Movie.
- Determine the maximum number of movies by any director.
- Load Raters.
- Get the number of ratings for a particular rater.
- Find the maximum number of ratings by any rater.
- Find the number of ratings a particular movie has.
- Determine how many movies have been rated.

Since

26/12/22

Version

1.0

6.7.2 Member Function Documentation

6.7.2.1 loadMovies()

```
ArrayList< Movie > recommendation_system.ratings.FirstRatings.loadMovies (
    String fileName )
```

Parameters

<i>fileName</i>	A file of movie information
-----------------	-----------------------------

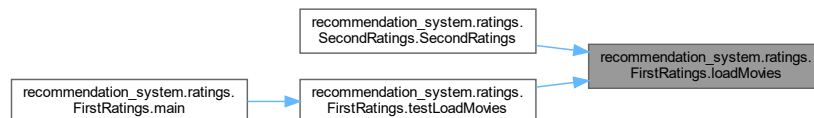

Returns

ArrayList<Movie> with all of the movie data from the file

Here is the call graph for this function:

Here is the caller graph for this function:

**6.7.2.2 loadRaters()**

```
ArrayList< Rater > recommendation_system.ratings.FirstRatings.loadRaters (
    String fileName )
```

Load Raters - Raters is class for storing the data about one rating of an item.

Parameters

<i>fileName</i>	Ratings file
-----------------	--------------

Returns

ArrayList<Rater> of Raters

Here is the call graph for this function:

Here is the caller graph for this function:

**6.7.2.3 main()**

```
static void recommendation_system.ratings.FirstRatings.main (
    String[] args ) [static]
```

Here is the call graph for this function:

6.7.2.4 testLoadMovies()

```
void recommendation_system.ratings.FirstRatings.testLoadMovies ( )
```

This method determine the maximum number of movies by any director, and who the directors are that directed that many movies. Remember that some movies may have more than one director. Here is the call graph for this function:

Here is the caller graph for this function:

6.7.2.5 testLoadRaters()

```
void recommendation_system.ratings.FirstRatings.testLoadRaters (
    String filename )
```

This method find the number of ratings by rater, the number of ratings by movie and determine how many movies have been rated

Parameters

<i>filename</i>	- A String variable representing the filename
-----------------	---

Here is the call graph for this function:

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/ratings/FirstRatings.java`

6.8 recommendation_system.ratings.FourthRatingsOptimized Class Reference

Public Member Functions

- `ArrayList< Rating > getSimilarRatings` (String raterID, int numSimilarRaters, int minimalRaters)
- `ArrayList< Rating > getSimilarRatingsByFilter` (String raterID, int numSimilarRaters, int minimalRaters, [Filter](#) f)

Static Public Member Functions

- static void `main` (String[] args)

6.8.1 Detailed Description

Class to get similar ratings - Phase 4 (Optimized) Instead of iterate all movie in the MovieDataBase, we use the movie list that only the topSimilarRater's movie. Greatly reduce the time.

DUKE: "sum of (similar rating(i) *rating of the movie(i))/count of the raters"

WEIXU: "sum of (similar rating(i) *rating of the movie(i))/ sum of the similar rating(i)"

The class contains the necessary methods for:

- Get a similarity rating for each rater
- Get a similar ratings
- Get a similar ratings by filter

Since

1/1/23

Version

1.0

6.8.2 Member Function Documentation

6.8.2.1 getSimilarRatings()

```
ArrayList< Rating > recommendation_system.ratings.FourthRatingsOptimized.getSimilarRatings (
    String raterID,
    int numSimilarRaters,
    int minimalRaters )
```

This method obtains the movies and their weighted average ratings using only the top numSimilarRaters with positive ratings and including only those movies that have at least minimalRaters ratings from those most similar raters (not just minimalRaters ratings overall).

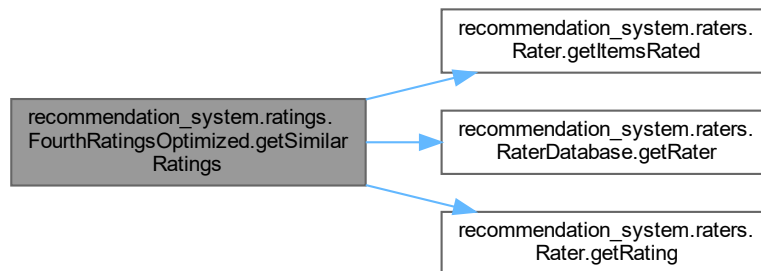

Parameters

<i>raterID</i>	Rater to analyze (not included into the analysis)
<i>numSimilarRaters</i>	Raters to be analyzed within the set recommended to the user
<i>minimalRaters</i>	Minimum number of Raters to have recommended a movie

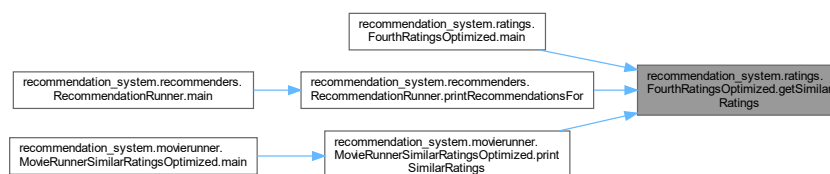

Returns

ArrayList - Movies and their weighted average ratings

Here is the call graph for this function:

Here is the caller graph for this function:

6.8.2.2 getSimilarRatingsByFilter()

```
ArrayList< Rating > recommendation_system.ratings.FourthRatingsOptimized.getSimilarRatingsByFilter (
    String raterID,
    int numSimilarRaters,
    int minimalRaters,
    Filter f )
```

This method gets similar ratings following a certain criteria

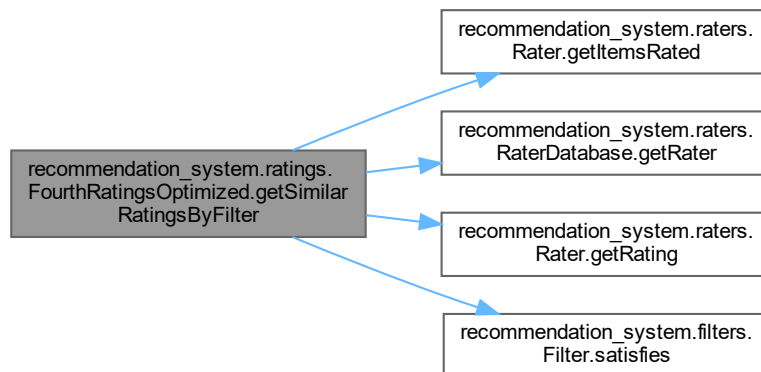

Parameters

<i>raterID</i>	Rater to analyze (not included into the analysis)
<i>numSimilarRaters</i>	Raters to be analyzed within the set recommended to the user
<i>minimalRaters</i>	Minimum number of Raters to have recommended a movie
<i>f</i>	- Represents the filters

Returns

ArrayList - Movies and their weighted average ratings

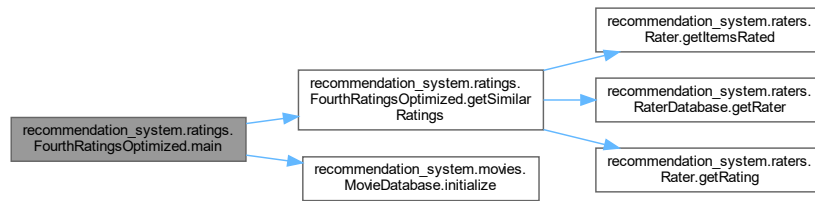

Here is the call graph for this function:

6.8.2.3 main()

```
static void recommendation_system.ratings.FourthRatingsOptimized.main (
    String[] args ) [static]
```

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/ratings/FourthRatingsOptimized.java`

6.9 recommendation_system.filters.GenreFilter Class Reference

Inheritance diagram for `recommendation_system.filters.GenreFilter`:

Collaboration diagram for `recommendation_system.filters.GenreFilter`:

Public Member Functions

- [GenreFilter](#) (String genre)
- boolean [satisfies](#) (String id)

6.9.1 Detailed Description

This class filters the movies based on the specific genres that the user wants to watch. Note that movies may have several genres.

The class contains the necessary methods for:

- Filtering movies based on their genres

Since

13/12/22

Version

1.0

6.9.2 Constructor & Destructor Documentation

6.9.2.1 GenreFilter()

```
recommendation_system.filters.GenreFilter.GenreFilter (
    String genre )
```

Builder overload

Parameters

<i>genre</i>	A string variable that represents the genre of the movies
--------------	---

6.9.3 Member Function Documentation

6.9.3.1 satisfies()

```
boolean recommendation_system.filters.GenreFilter.satisfies (
    String id )
```

This method proves if the movie has the genres that the user want

Parameters

<i>id</i>	A string variable representing the ID of the movie
-----------	--

Returns

Boolean - True if movie has one of the genres that the user wants to filter - False otherwise

Implements [recommendation_system.filters.Filter](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- [src/main/java/recommendation_system/filters/GenreFilter.java](#)

6.10 recommendation_system.edu.duke.ImageResource Class Reference

Public Member Functions

6.11 recommendation_system.filters.MinutesFilter Class Reference

Inheritance diagram for `recommendation_system.filters.MinutesFilter`:

Collaboration diagram for recommendation_system.filters.MinutesFilter:

Public Member Functions

- `MinutesFilter` (int min, int max)
- boolean `satisfies` (String id)

6.11.1 Detailed Description

This class filters the movies based on the specific duration that the user wants.

The class contains the necessary methods for:

- Filtering movies based on their duration

Since

13/12/22

Version

1.0

6.11.2 Constructor & Destructor Documentation

6.11.2.1 MinutesFilter()

```
recommendation_system.filters.MinutesFilter.MinutesFilter (
    int min,
    int max )
```

Builder overload

Parameters

<i>min</i>	An integer variable representing the Minimum of minutes that the movie should have
<i>max</i>	An integer variable representing the Maximum of minutes that the movie should have

6.11.3 Member Function Documentation

6.11.3.1 satisfies()

```
boolean recommendation_system.filters.MinutesFilter.satisfies (  
    String id )
```

This method proves if the movie is within the minutes that the user wants

Parameters

<i>id</i>	A string variable representing the ID of the movie
-----------	--

Returns

Boolean - True if movie is within the minutes that the user wants to filter - False otherwise

Implements [recommendation_system.filters.Filter](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/filters/MinutesFilter.java`

6.12 recommendation_system.movies.Movie Class Reference

6.12.1 Detailed Description

Plain Old Java Object (POJO) class for storing the data about one movie An immutable passive data object (PDO) to represent item data

The class contains the necessary methods for:

- A constructor with eight parameters to initialize the private variables
- Eight getter methods to return the private information
- A toString method for representing movie information as a String

Since

13/12/22

Version

1.0

6.12.2 Constructor & Destructor Documentation

6.12.2.1 Movie() [1/2]

```
recommendation_system.movies.Movie.Movie (
    String anID,
    String aTitle,
    String aYear,
    String theGenres )
```

Builder overload

Parameters

<i>anID</i>	A String variable representing the IMDB ID of the movie
<i>aTitle</i>	A String variable for the movie's title
<i>aYear</i>	An integer representing the year
<i>theGenres</i>	String of one or more genres separated by commas

Generated by Doxygen

6.12.2.2 Movie() [2/2]

```
recommendation_system.movies.Movie.Movie (
    String anID,
    String aTitle,
    String aYear,
    String theGenres,
    String aDirector,
    String aCountry,
    String aPoster,
    int theMinutes )
```

Builder overload

Parameters

<i>anID</i>	A String variable representing the IMDB ID of the movie
<i>aTitle</i>	A String variable for the movie's title
<i>aYear</i>	An integer representing the year
<i>theGenres</i>	String of one or more genres separated by commas
<i>aDirector</i>	String of one or more directors of the movie separated by commas
<i>aCountry</i>	String of one or more countries the film was made in, separated by commas
<i>aPoster</i>	String that is a link to an image of the movie poster if one exists, or "N/A"
<i>theMinutes</i>	An integer for the length of the movie

6.12.3 Member Function Documentation

6.12.3.1 getCountry()

```
String recommendation_system.movies.Movie.getCountry ( )
```

This method gets the country of the movie

Returns

String - Countries the film was made in, separated by commas

6.12.3.2 getDirector()

```
String recommendation_system.movies.Movie.getDirector ( )
```

This methods gets the directors of the movie

Returns

String - Directors of the movie separated by commas

6.12.3.3 getGenres()

```
String recommendation_system.movies.Movie.getGenres ( )
```

This method gets the genres of the movie

Returns

String - Genres associated with this item

6.12.3.4 getID()

```
String recommendation_system.movies.Movie.getID ( )
```

This method gets the ID of the movie

Returns

String - ID associated with this item

6.12.3.5 getMinutes()

```
int recommendation_system.movies.Movie.getMinutes ( )
```

This method get the minutes of the movie

Returns

int - An integer for the length of the movie

6.12.3.6 getPoster()

```
String recommendation_system.movies.Movie.getPoster ( )
```

This method get the poster of the movie

Returns

String - A link to an image of the movie poster if one exists, or "N/A"

6.12.3.7 getTitle()

```
String recommendation_system.movies.Movie.getTitle ( )
```

This method gets the title of the movie

Returns

String - Title of this item

6.12.3.8 getYear()

```
int recommendation_system.movies.Movie.getYear ( )
```

This method gets the year of the movie

Returns

int - Year in which this item was published

6.12.3.9 toString()

```
String recommendation_system.movies.Movie.toString ( )
```

This method gets the movie's information

Returns

String - Item's information

- static ArrayList< String > [filterBy](#) ([Filter](#) f)

6.13.1 Detailed Description

This class is an efficient way to get information about movies. It stores movie information in a HashMap for fast lookup of movie information given a movie ID.

The class contains the necessary methods for:

- Filtering movies based on queries

Since

13/12/22

Version

1.0

6.13.2 Member Function Documentation

6.13.2.1 containsID()

```
static boolean recommendation_system.movies.MovieDatabase.containsID (  
    String id )    [static]
```

This method prove if the HashMap contains the ID of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

Returns

Boolean - True if the HashMap contains the ID - False otherwise

Here is the call graph for this function:

6.13.2.3 getCountry()

```
static String recommendation_system.movies.MovieDatabase.getCountry (
    String id ) [static]
```

This method gets the country of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

Returns

String - Country of the movie

Here is the call graph for this function:

Here is the caller graph for this function:

6.13.2.4 getDirector()

```
static String recommendation_system.movies.MovieDatabase.getDirector (
    String id ) [static]
```

This method gets the director of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

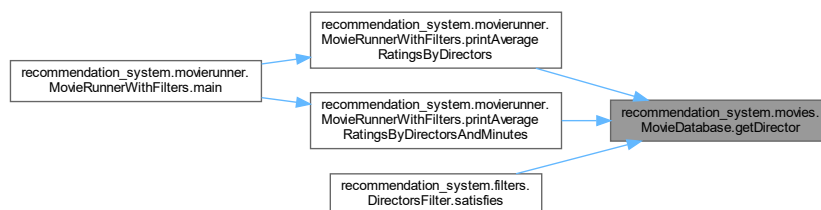

Returns

String - Directors of the movie

Here is the call graph for this function:

Here is the caller graph for this function:

6.13.2.5 getGenres()

```
static String recommendation_system.movies.MovieDatabase.getGenres (
    String id ) [static]
```

This method gets the genres of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

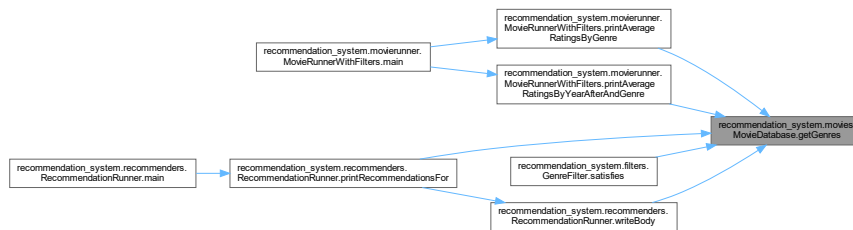

Returns

String - Genres of the movie

Here is the call graph for this function:

Here is the caller graph for this function:

6.13.2.6 getMinutes()

```
static int recommendation_system.movies.MovieDatabase.getMinutes (
    String id ) [static]
```

This method gets the minutes of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

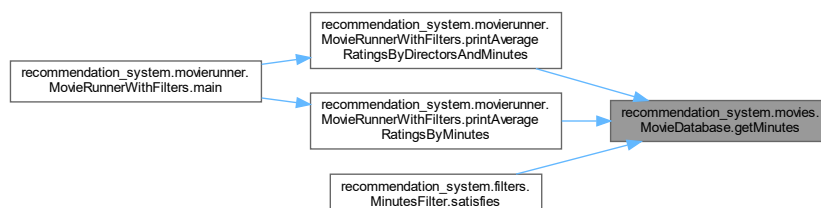

Returns

Int - Minutes of the movie

Here is the call graph for this function:

Here is the caller graph for this function:

6.13.2.7 getMovie()

```
static Movie recommendation_system.movies.MovieDatabase.getMovie (
    String id ) [static]
```

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

Returns

[Movie](#) - Film object to be analyzed

Here is the call graph for this function:

6.13.2.8 getPoster()

```
static String recommendation_system.movies.MovieDatabase.getPoster (
    String id ) [static]
```

This method gets the poster of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

Returns

String - Poster of the movie

Here is the call graph for this function:

Here is the caller graph for this function:

**6.13.2.9 getTitle()**

```
static String recommendation_system.movies.MovieDatabase.getTitle (
    String id ) [static]
```

This method gets the title of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

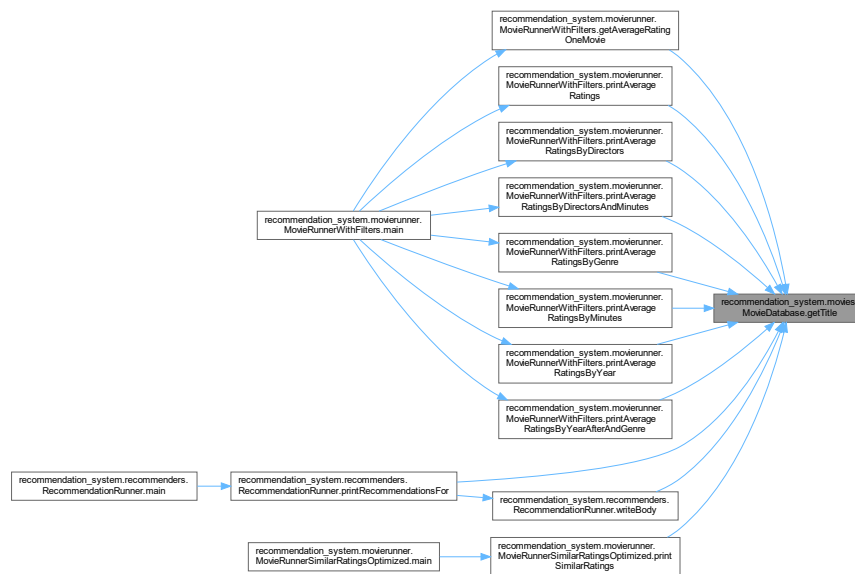

Returns

String - Title of the movie

Here is the call graph for this function:

Here is the caller graph for this function:

6.13.2.10 getYear()

```
static int recommendation_system.movies.MovieDatabase.getYear (
    String id ) [static]
```

This method gets the year of the movie

Parameters

<i>id</i>	- A String variable representing the ID of the movie
-----------	--

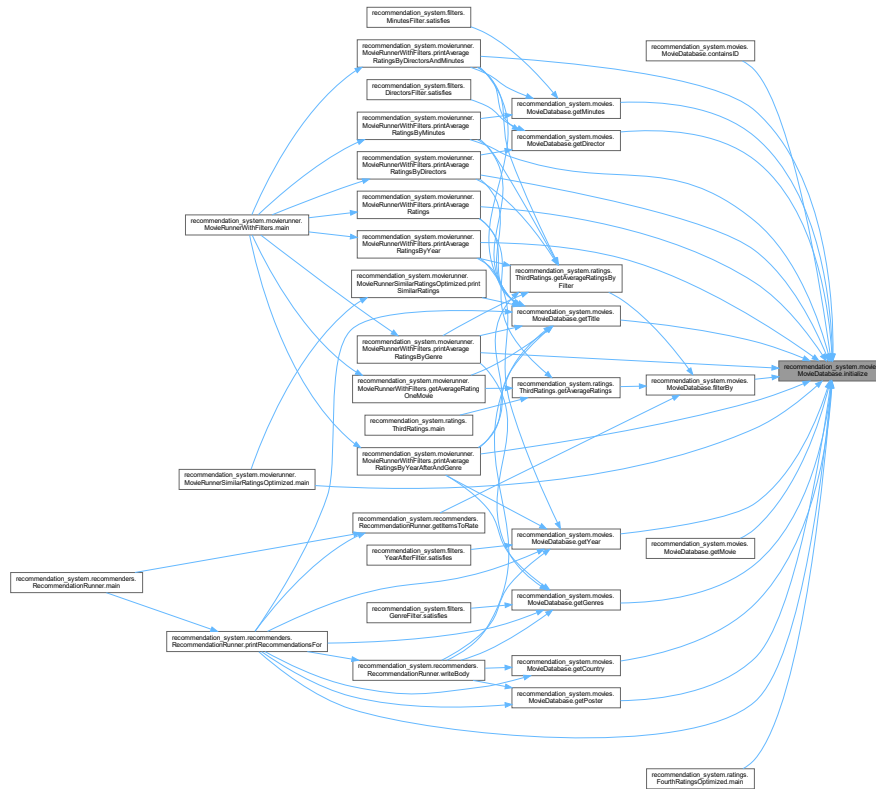

Returns

Int - Year of the movie

Here is the call graph for this function:

Here is the caller graph for this function:

6.13.2.12 size()

```
static int recommendation_system.movies.MovieDatabase.size ( ) [static]
```

This method gets the number of movies stored on the list

Returns

Int - Number of movies stored on the HashMap

Here is the caller graph for this function:

6.18 recommendation_system.raters.PlainRater Class Reference

Inheritance diagram for recommendation_system.raters.PlainRater:

Collaboration diagram for recommendation_system.raters.PlainRater:

Public Member Functions

- [PlainRater](#) (String id)
- void [addRating](#) (String item, double rating)
- boolean [hasRating](#) (String item)
- String [getID](#) ()
- double [getRating](#) (String item)
- int [numRatings](#) ()
- ArrayList< String > [getItemsRated](#) ()

6.18.1 Detailed Description

Keeps track of one rater and all their ratings

The class contains the necessary methods for:

- A constructor with one parameter of the ID for the rater.
- A method addRating that has two parameters, a String named item and a double named rating
- A method getID with no parameters to get the ID of the rater.
- A method getRating that has one parameter item.
- A method numRatings that returns the number of ratings this rater has.
- A method getItemsRated that has no parameters.

Since

26/12/22

Version

1.0

6.18.2 Constructor & Destructor Documentation

6.18.2.1 PlainRater()

```
recommendation_system.raters.PlainRater.PlainRater (
    String id )
```

Builder overload

Parameters

<i>id</i>	ID for the rater
-----------	------------------

6.18.3 Member Function Documentation

6.18.3.1 addRating()

```
void recommendation_system.raters.PlainRater.addRating (
    String item,
    double rating )
```

This method adds a rating to the ArrayList of ratings associated with a user

Parameters

<i>item</i>	A String variable representing the ID of the movie
<i>rating</i>	A double variable representing the rating of the movie

Implements [recommendation_system.raters.Rater](#).

6.18.3.2 getID()

```
String recommendation_system.raters.PlainRater.getID ( )
```

This method gets the ID of the raters

Returns

String - ID of the rater

Implements [recommendation_system.raters.Rater](#).

6.18.3.3 `getItemsRated()`

```
ArrayList< String > recommendation_system.raters.PlainRater.getItemsRated ( )
```

This method gets list of the movies rated

Returns

ArrayList<String> - ID of all movies rated by a user

Implements [recommendation_system.raters.Rater](#).

6.18.3.4 `getRating()`

```
double recommendation_system.raters.PlainRater.getRating (
    String item )
```

This method gets the rating of the movie

Parameters

<i>item</i>	A String variable representing the ID of the movie
-------------	--

Returns

double - Value associated with a specific movie rating - If there is no rating -1

Implements [recommendation_system.raters.Rater](#).

6.18.3.5 `hasRating()`

```
boolean recommendation_system.raters.PlainRater.hasRating (
    String item )
```

This method verify if a user has rated a particular movie

Parameters

<i>item</i>	A String variable representing the ID of the movie
-------------	--

Returns

Boolean - True if the user has rated the movie - False otherwise

Implements [recommendation_system.raters.Rater](#).

6.18.3.6 numRatings()

```
int recommendation_system.raters.PlainRater.numRatings ( )
```

This method gets the number of the ratings in the list

Returns

int - Size of the ratings ArrayList

Implements [recommendation_system.raters.Rater](#).

The documentation for this class was generated from the following file:

6.21 recommendation_system.raters.Rater Interface Reference

Inheritance diagram for recommendation_system.raters.Rater:

Public Member Functions

- void [addRating](#) (String item, double rating)
- boolean [hasRating](#) (String item)
- String [getID](#) ()
- double [getRating](#) (String item)
- int [numRatings](#) ()
- ArrayList< String > [getItemsRated](#) ()

6.21.1 Detailed Description

This interface allows to implement different versions of raters.

The Interface contains:

- The method `addRating` with one String parameter representing an ID and a Double parameter representing the rating
- The method `hasRating` with one String parameter representing an ID
- The method `getID`
- The method `getRating` with one String parameter representing an ID
- The method `numRating`
- The method `getItemsRated`

Since

1/1/23

Version

1.0

6.21.2 Member Function Documentation

6.21.2.1 addRating()

```
void recommendation_system.raters.Rater.addRating (
    String item,
    double rating )
```

This method adds ratings to the list

Parameters

<i>item</i>	- A String variable representing the IMDB ID of the movies
<i>rating</i>	- A Double variable representing the rating

Implemented in [recommendation_system.raters.EfficientRater](#), and [recommendation_system.raters.PlainRater](#).

Here is the caller graph for this function:

6.21.2.2 getID()

```
String recommendation_system.raters.Rater.getID ( )
```

This method gets the ID of the movie

Returns

String - ID of the movies

Implemented in [recommendation_system.raters.EfficientRater](#), and [recommendation_system.raters.PlainRater](#).

6.21.2.3 getItemsRated()

```
ArrayList< String > recommendation_system.raters.Rater.getItemsRated ( )
```

This method gets the list of the rated movies

Returns

ArrayList<String> of the rated movies

Implemented in [recommendation_system.raters.EfficientRater](#), and [recommendation_system.raters.PlainRater](#).

Here is the caller graph for this function:

6.21.2.4 getRating()

```
double recommendation_system.raters.Rater.getRating (
    String item )
```

This method gets the rating of the movie

Parameters

<i>item</i>	- A String variable representing ID
-------------	-------------------------------------

Returns

Double - Rating

Implemented in [recommendation_system.raters.EfficientRater](#), and [recommendation_system.raters.PlainRater](#).

Here is the caller graph for this function:

6.21.2.5 hasRating()

```
boolean recommendation_system.raters.Rater.hasRating (
    String item )
```

This method proves if the list contains the ID of the movie

Parameters

<i>item</i>	- A String variable representing the IMDB ID of the movies
-------------	--

Returns

Boolean - True if the list contains the ID of the movie- False otherwise

Implemented in [recommendation_system.raters.EfficientRater](#), and [recommendation_system.raters.PlainRater](#).

6.21.2.6 numRatings()

```
int recommendation_system.raters.Rater.numRatings ( )
```

This method gets the number of ratings on the list

Returns

Integer - Number of ratings

Implemented in [recommendation_system.raters.EfficientRater](#), and [recommendation_system.raters.PlainRater](#).

The documentation for this interface was generated from the following file:

- [src/main/java/recommendation_system/raters/Rater.java](#)

6.22 recommendation_system.raters.RaterDatabase Class Reference

Static Public Member Functions

- static void [initialize](#) (String filename)
- static void [addRatings](#) (String filename)
- static void [addRaterRating](#) (String raterID, String movieID, double rating)
- static [Rater](#) [getRater](#) (String id)
- static ArrayList< [Rater](#) > [getRaters](#) ()
- static int [size](#) ()

6.22.1 Detailed Description

Class to store all information about raters

The class contains the necessary methods for:

- Initialize HashMap ourRaters
- Add ratings
- Add rater ratings
- Get a rater
- Get the list of the raters
- Get the number of the raters

Since

30/12/22

Version

1.0

6.22.2 Member Function Documentation

6.22.2.1 addRaterRating()

```
static void recommendation_system.raters.RaterDatabase.addRaterRating (
    String raterID,
    String movieID,
    double rating ) [static]
```

This method add the raters

Parameters

<i>raterID</i>	- A String variable representing the ID of the rater
<i>movieID</i>	- A String variable representing the ID of the movie
<i>rating</i>	- A double variable representing the rating

Here is the call graph for this function:

Here is the caller graph for this function:

6.22.2.2 addRatings()

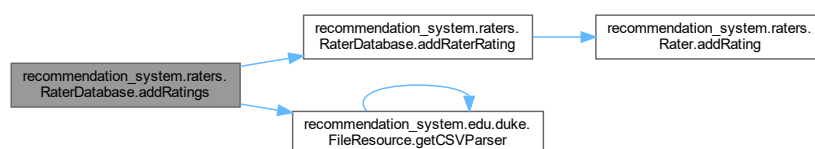

```
static void recommendation_system.raters.RaterDatabase.addRatings (
    String filename ) [static]
```

This method add the ratings

Parameters

<i>filename</i>	- A String variable representing the filename
-----------------	---

Here is the call graph for this function:

Here is the caller graph for this function:

6.22.2.3 `getRater()`

```
static Rater recommendation_system.raters.RaterDatabase.getRater (
    String id ) [static]
```

This method gets raters ID

Parameters

<i>id</i>	- A String variable representing the ID of the rater
-----------	--

Returns

`Rater` - `Rater` to be analyzed

Here is the caller graph for this function:

6.22.2.4 `getRaters()`

```
static ArrayList< Rater > recommendation_system.raters.RaterDatabase.getRaters ( ) [static]
```

This method get the list of raters

Returns

`ArrayList<Rater>` of raters

6.22.2.5 initialize()

```
static void recommendation_system.raters.RaterDatabase.initialize (
    String filename ) [static]
```

This method initialize the HashMap ourRaters

Parameters

<i>filename</i>	- A String variable representing the filename
-----------------	---

Here is the call graph for this function:

6.22.2.6 size()

```
static int recommendation_system.raters.RaterDatabase.size ( ) [static]
```

This method gets the number of raters

Returns

Integer - Number of raters

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/raters/RaterDatabase.java`

6.23 recommendation_system.ratings.Rating Class Reference

Inheritance diagram for recommendation_system.ratings.Rating:

Collaboration diagram for recommendation_system.ratings.Rating:

Public Member Functions

- [Rating](#) (String anItem, double aValue)
- String [getItem](#) ()
- double [getValue](#) ()
- String [toString](#) ()
- int [compareTo](#) ([Rating](#) other)

6.23.1 Detailed Description

Plain Old Java Object (POJO) class for storing the data about one rating of an item. An immutable passive data object (PDO) to represent the rating data.

The class contains the necessary methods for:

- A constructor with two parameters to initialize the private variables.
- Two getter methods getItem and getValue.
- A toString method to represent rating information as a String.
- A compareTo method to compare this rating with another rating.

Since

26/12/22

Version

1.0

6.23.2 Constructor & Destructor Documentation

6.23.2.1 Rating()

```
recommendation_system.ratings.Rating.Rating (
    String anItem,
    double aValue )
```

Builder overload

Parameters

<i>anItem</i>	A String variable representing the IMDB ID of the movie
<i>aValue</i>	A double variable representing the rating of the movie

6.23.3 Member Function Documentation

6.23.3.1 compareTo()

```
int recommendation_system.ratings.Rating.compareTo (
    Rating other )
```

This method compare two ratings by their values

Parameters

<i>other</i>	the object to be compared.
--------------	----------------------------

Returns

int - -1 lower, 1 higher, 0 equal

6.23.3.2 getItem()

```
String recommendation_system.ratings.Rating.getItem ( )
```

This method gets the IMDB ID of the movie

Returns

String - IMDB ID of the movie

Here is the caller graph for this function:

**6.23.3.3 getValue()**

```
double recommendation_system.ratings.Rating.getValue ( )
```

This method gets the value (rating) of the movie

Returns

double - [Rating](#) of the movie (it can be used in calculations)

Here is the caller graph for this function:

6.23.3.4 toString()

```
String recommendation_system.ratings.Rating.toString ( )
```

This method gets all the rating information

Returns

String - All the rating information

Here is the call graph for this function:

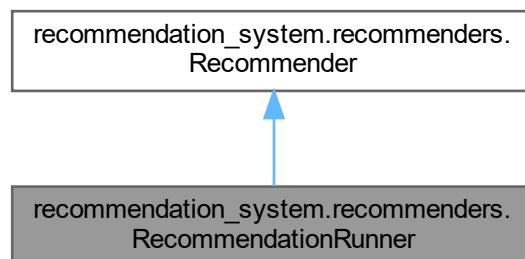

The documentation for this class was generated from the following file:

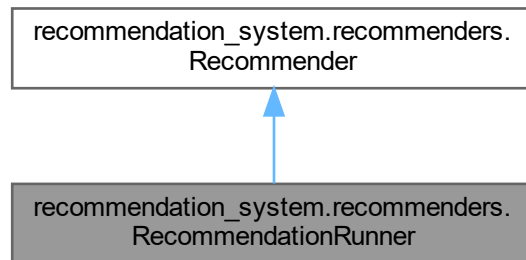

- [src/main/java/recommendation_system/ratings/Rating.java](#)

6.24 recommendation_system.recommenders.RecommendationRunner Class Reference

Inheritance diagram for `recommendation_system.recommenders.RecommendationRunner`:

Collaboration diagram for recommendation_system.recommenders.RecommendationRunner:

Public Member Functions

- String [getFilename](#) ()
- void [setFilename](#) (String filename)
- Path [getPathToFile](#) ()
- void [setPathToFile](#) (Path pathToFile)
- ArrayList< String > [getItemsToRate](#) ()
- void [writeHtmlHead](#) () throws IOException
- void [writeCss](#) () throws IOException
- void [writeBody](#) (ArrayList< [Rating](#) > outID) throws IOException
- void [printRecommendationsFor](#) (String webRaterID)

Static Public Member Functions

- static void [main](#) (String[] args) throws IOException

6.24.1 Detailed Description

Class to run the methods on the recommender interface and write the HTML

The class contains the necessary methods for:

- Get the file name
- Set the file name
- Get the path to file
- Set the path to file
- Get the movies to rate
- Write HTMLHead
- Write CSS
- Write HTMLBody
- Print recommendations

Since

1/1/23

Version

1.0

6.24.2 Member Function Documentation

6.24.2.1 getFilename()

```
String recommendation_system.recommenders.RecommendationRunner.getFilename ( )
```

This method gets the file name of the resulting HTML

Returns

String - filename

6.24.2.2 getItemsToRate()

```
ArrayList< String > recommendation_system.recommenders.RecommendationRunner.getItemsToRate ( )
```

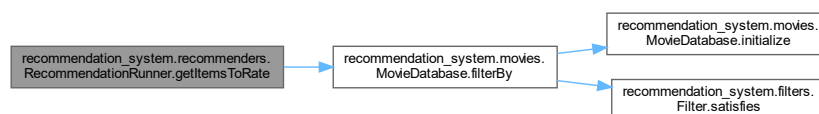

This method randomly pick 10 movie to let the user to rate Modified for our simulation - Now returns zero

Returns

Arraylist<String> of the movies to be rate

Implements [recommendation_system.recommenders.Recommender](#).

Here is the call graph for this function:

Here is the caller graph for this function:

6.24.2.3 getPathToFile()

Path recommendation_system.recommenders.RecommendationRunner.getPathToFile ()

This method gets the path to the resulting HTML

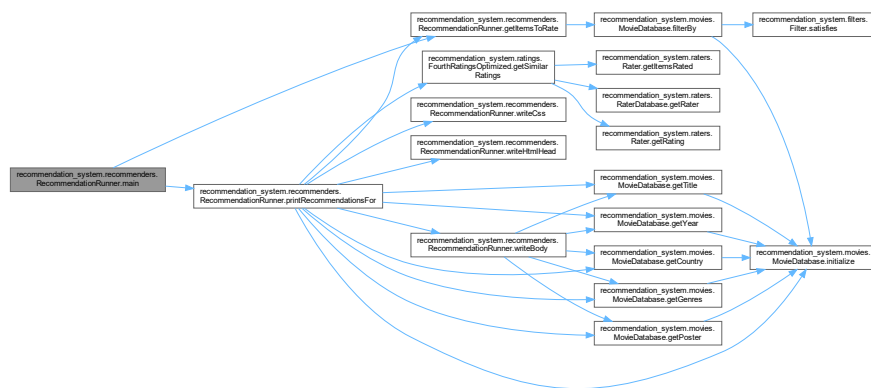

Returns

the pathToFile

6.24.2.4 main()

```
static void recommendation_system.recommenders.RecommendationRunner.main (
    String[] args ) throws IOException [static]
```

Here is the call graph for this function:

6.24.2.5 printRecommendationsFor()

```
void recommendation_system.recommenders.RecommendationRunner.printRecommendationsFor (
    String webRaterID )
```

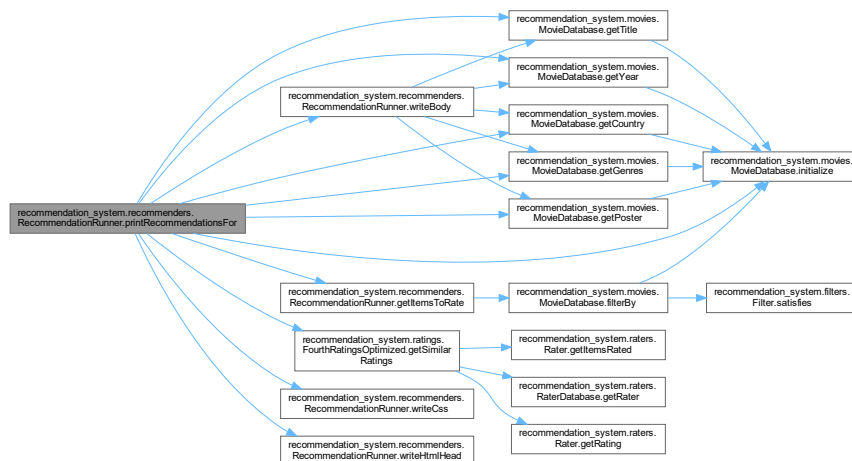

This method prints the recommendations

Parameters

<i>webRaterID</i>	- A String parameter representing a new rater
-------------------	---

Implements [recommendation_system.recommenders.Recommender](#).

Here is the call graph for this function:

Here is the caller graph for this function:

6.24.2.6 setFilename()

```
void recommendation_system.recommenders.RecommendationRunner.setFilename (
    String filename )
```

This method Sets the File name to resulting HTML

Parameters

<i>filename</i>	The filename to set
-----------------	---------------------

6.24.2.7 setPathToFile()

```
void recommendation_system.recommenders.RecommendationRunner.setPathToFile (
    Path pathToFile )
```

This method set the path to write resulting HTML

Parameters

<i>pathToFile</i>	set the path To write File
-------------------	----------------------------

6.24.2.8 writeBody()

```
void recommendation_system.recommenders.RecommendationRunner.writeBody (
    ArrayList< Rating > outID ) throws IOException
```

This method writes HTML Body

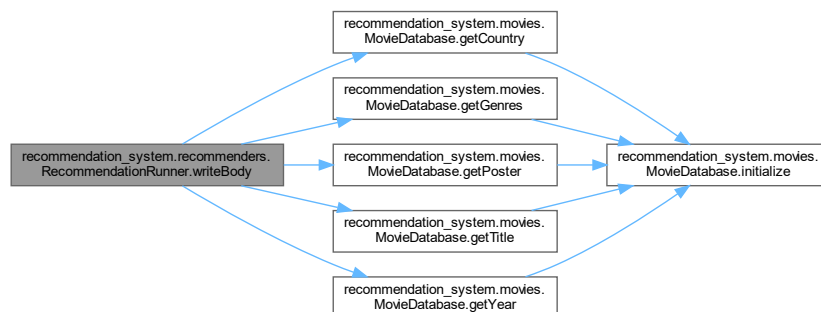

Parameters

<i>outID</i>	- ArrayList<Rating> of the movies
--------------	-----------------------------------

Exceptions

<i>IOException</i>	
--------------------	--

Here is the call graph for this function:

Here is the caller graph for this function:

6.24.2.9 writeCss()

```
void recommendation_system.recommenders.RecommendationRunner.writeCss ( ) throws IOException
```

This method writes CSS

Exceptions

<i>IOException</i>	
--------------------	--

Here is the caller graph for this function:

6.24.2.10 writeHtmlHead()

```
void recommendation_system.recommenders.RecommendationRunner.writeHtmlHead ( ) throws IOException
```

This method writes HTML Head

Exceptions

<i>IOException</i>	
--------------------	--

Here is the caller graph for this function:

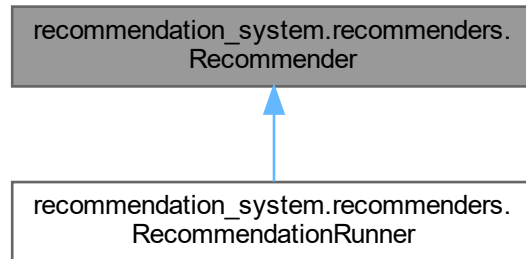

The documentation for this class was generated from the following file:

6.25 recommendation_system.recommenders.Recommender Interface Reference

Inheritance diagram for recommendation_system.recommenders.Recommender:

Public Member Functions

- `ArrayList< String > getItemsToRate ()`
- `void printRecommendationsFor (String webRaterID)`

6.25.1 Detailed Description

This interface allows the code to be integrated with the web site

The Interface contains:

- The method `getItemsToRate`
- The method `printRecommendationsFor` with one `String` parameter representing a new rater

Since

1/1/23

Version

1.0

6.25.2 Member Function Documentation

6.25.2.1 `getItemsToRate()`

```
ArrayList< String > recommendation_system.recommenders.Recommender.getItemsToRate ( )
```

This method returns a list of movie IDs that will be used to look up the movies in the MovieDatabase and present them to users to rate

Returns

Arraylist<String> of the movies to rate

Implemented in [recommendation_system.recommenders.RecommendationRunner](#).

6.25.2.2 `printRecommendationsFor()`

```
void recommendation_system.recommenders.Recommender.printRecommendationsFor (
    String webRaterID )
```

This method prints out an HTML table of the movies recommended for the given rater

Parameters

<i>webRaterID</i>	- A String parameter representing a new rater
-------------------	---

Implemented in [recommendation_system.recommenders.RecommendationRunner](#).

The documentation for this interface was generated from the following file:

- [src/main/java/recommendation_system/recommenders/Recommender.java](#)

Public Member Functions

- [SecondRatings](#) ()
- [SecondRatings](#) (String movieFile, String ratingFile)
- int [getMovieSize](#) ()
- int [getRaterSize](#) ()
- ArrayList< [Rating](#) > [getAverageRatings](#) (int minimalRaters)
- String [getTitle](#) (String movieID)
- String [getID](#) (String title)

Static Public Member Functions

- static void [main](#) (String[] args)

6.27.1 Detailed Description

Class to do many of the calculations focusing on computing averages on movie ratings. - Phase 2

The class contains the necessary methods for:

- Get the number of films to analyze.
- Get the number of raters to analyze.
- Get the average rating given to a movie by its raters.
- Get the rating of movies with their average.
- Obtain the title of a movie by its ID and vice versa.

Since

26/12/22

Version

1.0

6.27.2 Constructor & Destructor Documentation

6.27.2.1 SecondRatings() [1/2]

```
recommendation_system.ratings.SecondRatings.SecondRatings ( )
```

Default builder Here is the caller graph for this function:

6.27.2.2 SecondRatings() [2/2]

```
recommendation_system.ratings.SecondRatings.SecondRatings (
    String movieFile,
    String ratingFile )
```

Builder overload

Parameters

<i>movieFile</i>	Database of our movies
<i>ratingFile</i>	Database of our ratings

Here is the call graph for this function:

6.27.3 Member Function Documentation

6.27.3.1 getAverageRatings()

```
ArrayList< Rating > recommendation_system.ratings.SecondRatings.getAverageRatings (
    int minimalRaters )
```

This method gets the average ratings

Parameters

<i>minimalRaters</i>	Minimum number of raters required to make an average
----------------------	--

Returns

ArrayList<Rating> - [Rating](#) of movies with their average

Here is the caller graph for this function:

6.27.3.2 `getID()`

```
String recommendation_system.ratings.SecondRatings.getID (
    String title )
```

This method gets the ID of the movies

Parameters

<i>title</i>	A String variable for the movie's title
--------------	---

Returns

String - Variable representing the IMDB ID of the movie

6.27.3.3 `getMovieSize()`

```
int recommendation_system.ratings.SecondRatings.getMovieSize ( )
```

This method gets the number of films to analyze

Returns

int - Number of films to analyze

Here is the caller graph for this function:

**6.27.3.4 getRaterSize()**

```
int recommendation_system.ratings.SecondRatings.getRaterSize ( )
```

This method gets the number of the raters to analyze

Returns

int - Number of Raters to analyze

Here is the caller graph for this function:

**6.27.3.5 getTitle()**

```
String recommendation_system.ratings.SecondRatings.getTitle (
    String movieID )
```

This method gets the title of the movies

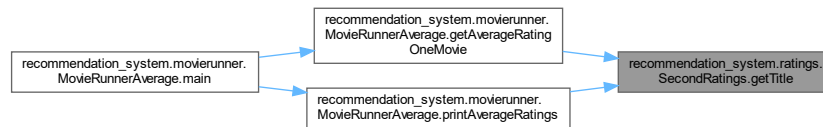

Parameters

<i>movieID</i>	A String variable representing the IMDB ID of the movie
----------------	---

Returns

String - Movie's title

Here is the caller graph for this function:

6.27.3.6 main()

```
static void recommendation_system.ratings.SecondRatings.main (
    String[] args ) [static]
```

- ArrayList< [Rating](#) > [getAverageRatings](#) (int minimalRaters)
- ArrayList< [Rating](#) > [getAverageRatingsByFilter](#) (int minimalRaters, [Filter](#) f)

Static Public Member Functions

- static void `main` (String[] args)

6.30.1 Detailed Description

Class to find the average rating of movies using different filters - Phase 3

The class contains the necessary methods for:

- Get a similarity rating for each rater
- Get a average ratings
- Get a average ratings by filters

Since

1/1/23

Version

1.0

6.30.2 Constructor & Destructor Documentation

6.30.2.1 ThirdRatings() [1/2]

```
recommendation_system.ratings.ThirdRatings.ThirdRatings ( )
```

Default Builder Here is the caller graph for this function:

6.30.2.2 ThirdRatings() [2/2]

```
recommendation_system.ratings.ThirdRatings.ThirdRatings (   
    String ratingFile )
```

Builder overload

Parameters

<i>ratingFile</i>	A String variable representing the rating file
-------------------	--

Here is the call graph for this function:

6.30.3 Member Function Documentation

6.30.3.1 `getAverageRatings()`

```
ArrayList< Rating > recommendation_system.ratings.ThirdRatings.getAverageRatings (
    int minimalRaters )
```

This method gets the average ratings

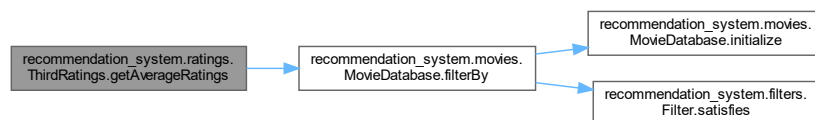

Parameters

<i>minimalRaters</i>	- Minimum number of raters required to make an average
----------------------	--

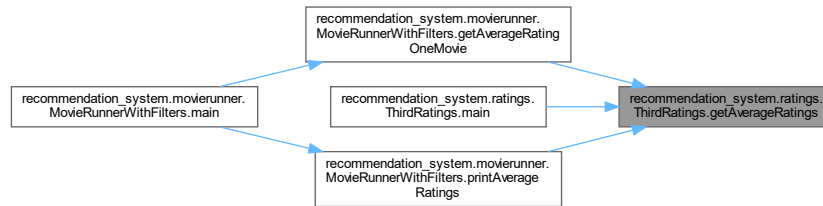

Returns

ArrayList<Rating> - [Rating](#) of movies with their average

Here is the call graph for this function:

Here is the caller graph for this function:

6.30.3.2 getAverageRatingsByFilter()

```

ArrayList< Rating > recommendation_system.ratings.ThirdRatings.getAverageRatingsByFilter (
    int minimalRaters,
    Filter f )
  
```

This method creates a list of all the movies that have at least `minimalRaters` ratings and satisfies the filter criteria

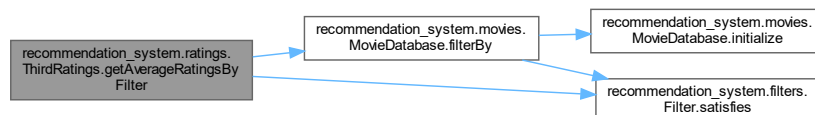

Parameters

<i>minimalRaters</i>	Minimum number of raters required to make an average
<i>f</i>	Represents filters

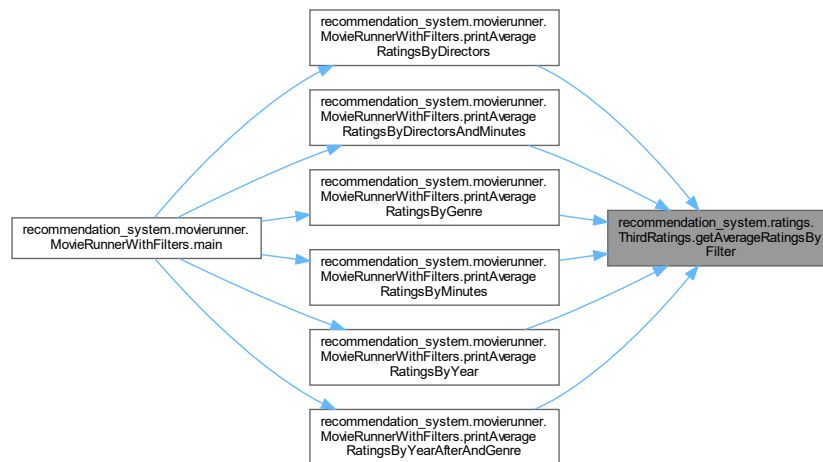

Returns

ArrayList<Rating> - [Rating](#) of movies with their average

Here is the call graph for this function:

Here is the caller graph for this function:

6.30.3.3 getRaterSize()

```
int recommendation_system.ratings.ThirdRatings.getRaterSize ( )
```

This method gets the number of the raters

Returns

Integer - Number of raters

Here is the caller graph for this function:

6.30.3.4 main()

```
static void recommendation_system.ratings.ThirdRatings.main (  
    String[] args ) [static]
```

Here is the call graph for this function:

6.31 recommendation_system.filters.TrueFilter Class Reference

Inheritance diagram for `recommendation_system.filters.TrueFilter`:

Collaboration diagram for `recommendation_system.filters.TrueFilter`:

Public Member Functions

- boolean [satisfies](#) (String id)

6.31.1 Detailed Description

This class can be used to select every movie from MovieDatabase

The class contains the necessary methods for:

- Select every movie from the movie database

Since

13/12/22

Version

1.0

6.31.2 Member Function Documentation

6.31.2.1 [satisfies\(\)](#)

```
boolean recommendation_system.filters.TrueFilter.satisfies (  
    String id )
```

Parameters

<i>id</i>	A string variable representing the ID of the movie
-----------	--

Returns

Boolean - It's satisfies method always returns true.

Implements [recommendation_system.filters.Filter](#).

The documentation for this class was generated from the following file:

- src/main/java/recommendation_system/filters/[TrueFilter.java](#)

6.32 recommendation_system.edu.duke.URLResource Class Reference

6.33 recommendation_system.filters.YearAfterFilter Class Reference

Inheritance diagram for recommendation_system.filters.YearAfterFilter:

Collaboration diagram for `recommendation_system.filters.YearAfterFilter`:

Public Member Functions

- [YearAfterFilter](#) (int year)
- boolean [satisfies](#) (String id)

6.33.1 Detailed Description

This class filters the movies released after or on the specific year that the user wants.

The class contains the necessary methods for:

- Filtering movies based on their released date

Since

13/12/22

Version

1.0

6.33.2 Constructor & Destructor Documentation

6.33.2.1 YearAfterFilter()

```
recommendation_system.filters.YearAfterFilter.YearAfterFilter (
    int year )
```

Builder overload

Parameters

<i>year</i>	An integer variable representing the release year
-------------	---

6.33.3 Member Function Documentation

6.33.3.1 satisfies()

```
boolean recommendation_system.filters.YearAfterFilter.satisfies (  
    String id )
```

This method proves if the movie was released after or on a certain year

Parameters

<i>id</i>	A string variable representing the ID of the movie
-----------	--

Returns

Boolean - True if movie was released after or on the year that the user wants to filter - False otherwise

Implements [recommendation_system.filters.Filter](#).

Here is the call graph for this function:

The documentation for this class was generated from the following file:

- `src/main/java/recommendation_system/filters/YearAfterFilter.java`
